# Quick guide Ambu® Manikin Management Module
Installation of software updates

Ambu endeavors to optimize the manikin training equipment. Based on customer feedback, the products are in a continuous improvement process. The Ambu training devices are also continuously updated with various updates.
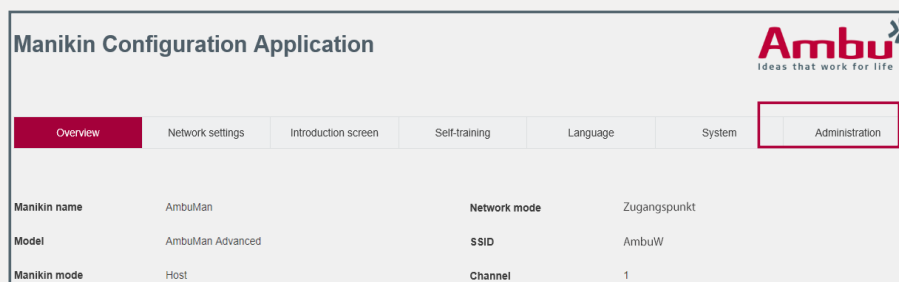

How to upload a software update will be explained in this quick guide.

Note: It is recommended to save the database of the manikin befor starting the software update installation. (See more on page 2 of this quick guide).
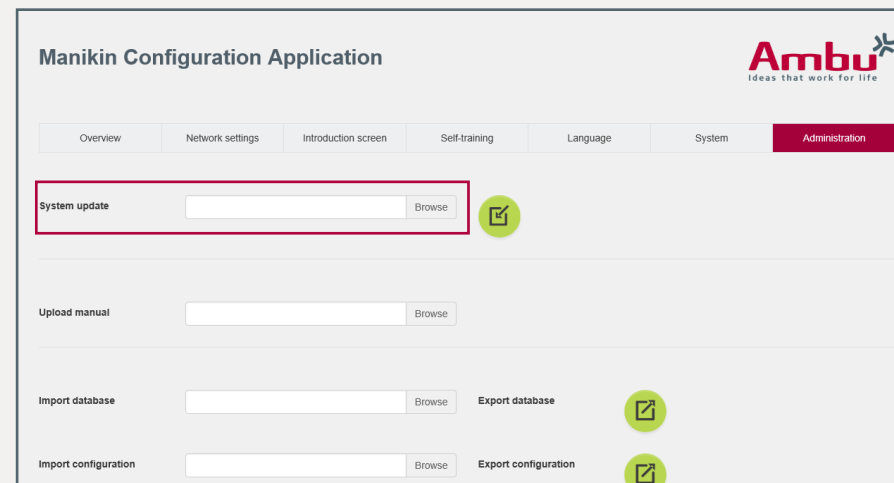

1. Open the configuration menu

192.168.1.1/config

Turn on the manikin and connect it with your mobile device. Open your webbrowser and enter **http://Ambu.login/config** or **192.168.1.1/config** into the adress field of the browser, to connect to the configuration menu of the manikin
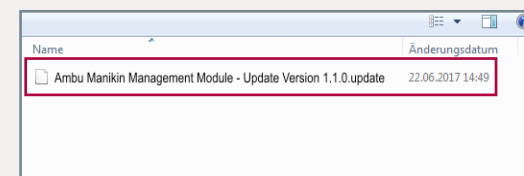

Manikin Configuration Application

| Overview | Network settings | Introduction screen | Self-training | Language | System | Administration |

Manikin name	AmbuMan	Network mode	Zugangspunkt
Model	AmbuMan Advanced	SSID	AmbuW
Manikin mode	Host	Channel	1

Click on the tab „Administration" in the configuration menu.

2. Upload of the software update

Manikin Configuration Application

| Overview | Network settings | Introduction screen | Self-training | Language | System | Administration |

| System update | | Browse |
Upload manual		Browse
Import database		Browse	Export database
Import configuration		Browse	Export configuration

To load a new software update onto the training device, open the appropriate file under „System Update". By clicking on „Browse" in the tab „System Update" it is possible to search for the desired file.

| Name | Änderungsdatum | Typ |
| Ambu Manikin Management Module - Update Version 1.1.0.update | 22.06.2017 14:49 | DUP |

Go to your location and select the software update and open it (in this case: Ambu Manikin Management Module-Update Version 1.1.0.dupdate - Software-Update V1.1.0).

Note: Save the update file in advance in an easy accessible location.

## Continue: Upload of the software update

The software file is automatically transferred to the appropriate field. To complete the update, click on the button „Import" .

## 3. Restart of the training manikin

The training manikin automatically shuts down and restarts to apply all updates. After starting up, reconnect with the trainer as described in section 1.
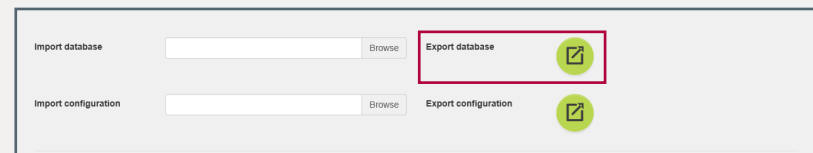

4. Review of the settings

After reconnecting to the manikin, the training device can be used as usual. You can look up the software version on the training device in the overview section of the configuration menu. Enter **http://Ambu.login/config** or **192.168.1.1/config** into the adress field of the browser.

In the tab Overview under „Softwareversion" can the curretn Version been found (in this caser: 1.1.0).

NOTE

Before starting the the software update, ideally save your database to your local drive. This guarantees that your changed data will be fully available even after the software update. Open tab „Administration" in the configuration menu. Click on the Export Database Button to export the whole database.
